

Range of Electromagnetic Flowmeters

Electromagnetic Flowmeter Series 6400

Working Principle

Electromagnetic Flowmeters are based on Faraday's Law of Electromagnetic Induction.

In an Electromagnetic Flowmeter, the magnetic field is generated by a set of coils. As the conductive liquid passes through the electromagnetic field, an electric voltage is induced in the liquid which is directly proportional to its velocity. This induced voltage is perpendicular to both, the liquid flow direction and the electromagnetic field direction. The voltage sensed by the electrodes is further processed by the transmitter to give standardised output signal or displayed in appropriate engineering unit.

The flux density of the electromagnetic field in a given Flowmeter and the distance between the electrodes are constant. Therefore, the induced voltage is only a function of liquid velocity.

$$E = K \times B \times \bar{v} \times D$$

where **E** : Induced voltage

K : Flow tube constant

B : Magnetic field strength

\bar{v} : Mean flow velocity

and **D** : Electrode spacing

Volume flow is calculated by the equation

$$Q = \bar{v} \times D^2 \times \pi / 4$$

Therefore, $Q = \frac{E \times D \times \pi}{K \times B \times 4}$

MagFlow 6410

The induced voltage is not affected by the physical properties of liquids like temperature, viscosity, pressure, density and conductivity, as long as the conductivity of the measured liquid is above the minimum threshold level. For reliable measurement, the pipe must be completely full of liquid.

The electromagnetic field coil assembly is excited by pulsed DC technique which eliminates the interfering noise and provides automatic zero correction.

MagFlow 6410

Installation precautions:

1. Installation location should be such that the Flowmeter will always remain full of liquid.
2. Minimum 5D upstream & 3D downstream straight lengths should be maintained at installation locations where 'D' is the pipe diameter.
3. The Flowmeter installation location should be free of bends, elbows, tees, valves, etc.

Ordering Code : Series 6400

Note: For MagProbe 6450 Insertion type Flowmeter - Sensor size, design of measuring sensor, flange material, sensor lining, earthing, coil housing choices are not available.

India's largest
2700 mm line size,
full bore
Electromagnetic
Flowmeter
from Adept

Your advantages with Adept Range. Size. Design excellence.

- ▲ Leaders in providing 'Total Solutions' for Flow Instrumentation, Controls, Telemetry and Smart Metering projects
- ▲ Operating in the instrumentation business since 1983
- ▲ Over 70000 Electromagnetic and Ultrasonic Flowmeters supplied to about 2500 customers
- ▲ ISO/IEC 17025:2017 accredited calibration laboratory
- ▲ ISO 9001:2015, ISO 14001:2015, ISO 45001:2018 accreditation from TUV NORD, Germany
- ▲ Recipient of the prestigious India Design Mark
- ▲ Faster deliveries due to large in-house capacity
- ▲ Best in class, 24x7 service support
- ▲ Best specifications guarantee value for your money
- ▲ Using SAP ERP System for effectively managing operations
- ▲ Managed by professional technocrats and qualified, committed, responsive team
